MesoMega Basic

How to switch on and off your device:
 First you need to remove the « green nose of MesoMega » by simply pressing at the top and clip it out.....Remember everything is very easy.....
 When the « nose » is out you will see the spacing of the battery indicated with a plus and a minus sign, those signs are on the battery too. Insert the battery respecting the symbols and clip it down to secure.

PLEASE REMEMBER THAT DIFFERENT BRANDS OF SYRINGES MAY NOT MATCH UP WITH THE NUMBERS ON THE GAUGE

MesoMega – How to get started.

Now just replace the « nose », replacing the down part first following the guides, then move up the front to clip again the top forks of the « nose » to the rear of the gun. Then gently press the trigger once, you see on the control panel the battery level bars appearing. Now press « V » for couple of seconds and the control panel light up to show you some pre-selected functions.

Also one « green » light is on, under « C », you are now in continuous mode pre-select for using a 10ml syringe and inject at 5ml per minutes. The number 4 in the corner indicate you are going to use a 10ml syringe. See next chapter how to change the syringe model.

By pressing the arrows up or down you will see the injection ml per minute increasing or decreasing. It means you will inject faster or slower.

10

Set your syringe...

- Please **have a look on the front part of the MesoMega** you can see some marking to indicate the positioning of the metal screw when changing syringe size. You will find an Allan Key in your gun kit that helps you to unscrew, and make loose the metal part of the syringe holding system. On the other side you have the cursor which is the second part of the syringe holding for the back of the syringe. This can be loose by just turning pulling up carefully the top of the cursor left or right. To lock again the cursor just pull back in position, the white part is fixed again.

The cursor can be locked and unlocked turning slowly the top only

Screw to be move with Allan Key inside the manual

12

A quick test to ensure syringe is secure...

- When you have set the syringe on the machine, if you want to be sure you have position fine the different part of the syringe body, and after you have locked the cursor again... just take the MesoMega and carefully put up side down, if the syringe is falling ... then you need to fix the syringe again.... If it doesn't move you have secured the syringe successfully.

Please also check the position of the syringe piston the top of the cross should be position like that...
